

CoPILOT[®]

PROFESSIONAL

CoPilot Professional

Deep Software Integration Capabilities

Integrate CoPilot Alongside Other Apps via SDK

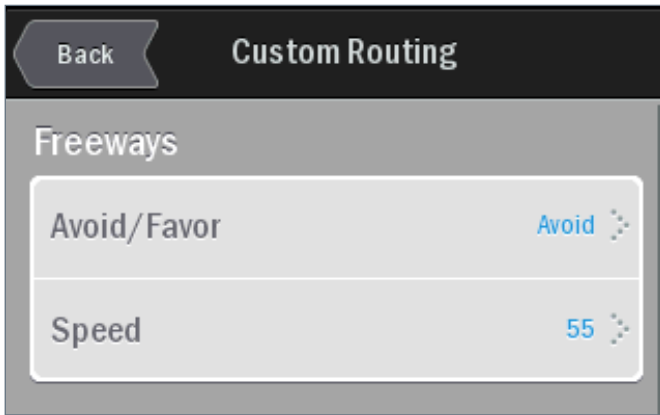

With over 250 APIs and function calls, the CoPilot Professional SDK is highly configurable for any large scale deployment. The SDK provides total control of all aspects of the navigation. On the device, CoPilot can be launched from within other applications while user interface, menu structure, routing profiles and audio commands can be customized to meet exact corporate requirements.

Platform Support: Windows Mobile, Windows CE, Android, iOS

Embed CoPilot Within Your Own Apps via CPIK

Through the introduction of the CoPilot Integration Kit (CPIK), ALK can now also provide the ability to use CoPilot as a seamlessly integrated component within mobile business apps for iOS and Android. This tight integration of CoPilot within a third party application ensures an excellent user experience that is simple and effective to deploy.

Platform Support: Android, iOS

Select route preferences in advance using the custom routing feature

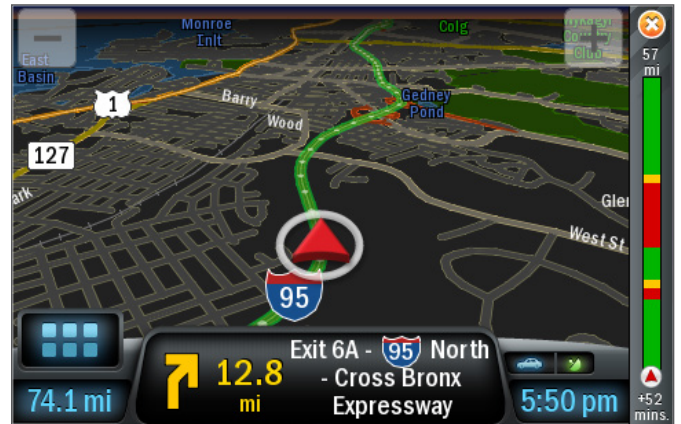

Features

- Send destinations – Remotely add/remove single or multiple locations
- Control the driver interface – Set driving view, adjust user interface and menu structure
- Pre-set routing parameters – Avoid/favor roads, discourage toll roads
- Standardize routing – Monitor and influence driver activity
- Integrated navigation – Launch CoPilot from within other applications and run navigation simultaneously on the device or integrate it directly within your own app

Benefits

- Monitor driver location and ETA on demand, ensuring safety and efficiency
- Save time and minimize error with automated appointment/stop address entry
- Deploy and redeploy confidently based on awareness of resource location and availability
- Generate precise time window ETAs - Send back office SLAs to CoPilot to optimize the route*

*Advanced SDK module

Stay one step ahead with access to timely ETA data

Geographic Coverage

CoPilot Professional is available in 27 languages and covers Europe, North America, the Middle East, South Africa, Australia and New Zealand.

Highly Engaged Professional Supporting Services

No two enterprise deployments are the same. While requirements may be similar, variations in hardware, applications and specific navigation needs require a hands-on approach to development and implementation. At ALK we provide custom corporate development and consultancy from an experienced global team of developers, sales, support and project management members in our organization. Working collaboratively with the customer and the partner, we provide rich pre-deployment integration and project management to deliver a successful implementation. Through this model we are proud to say we have successfully deployed over 500,000 licenses of our CoPilot Professional integrated navigation software on ruggedized devices worldwide.
