

CoPilot Professional for Emergency Services

Reliable, Integrated Navigation - When Every Second Counts

We understand that the fast response of Emergency Service workers is heavily reliant upon trusted, situation-aware navigation. To meet the varying needs of police, fire and medical emergencies, CoPilot Professional offers fully customizable features that ensure the vehicle is dispatched along the quickest, safest route to reach those in need.

The Benefits

- ➔ Calculate highly accurate ETAs based on travel at high speeds
- ➔ Improve back office control and routing efficiency
- ➔ Enhance driver compliance and safety
- ➔ Gain greater visibility of vehicles and guidance for drivers
- ➔ Provide reassurance to those in need
- ➔ Alert dispatch with automated prompts when the driver is off the planned route

Guidance From the Back Office to the Vehicle in Route

- Flexible routing with profiles customized to suit emergency conditions
- Constant back office monitoring for greater visibility of vehicles
- Real-time mapping and routing using specific lat/long coordinates
- Send a new route from the back office to the vehicle for a faster arrival time*
- Map panning & zooming to find shorter cut-through routes

*Requires RouteSync

Preconfigured Road Speed Settings: Adjusted For Travel at High Speed

- Volume levels of spoken turn-by-turn instructions can be increased to be heard above siren noise
- Turn instructions can be timed ahead of a turn rather than once the driver has reached or passed it
- ETAs based on actual high speeds driven to calculate highly accurate arrivals times for dispatch and those waiting for assistance

Back Office Compliance For More Efficient Navigation

RouteSync To further enhance your Emergency Service solution, pair CoPilot Professional with ALK's unique RouteSync capability. RouteSync provides the crucial link between the planned route in the back office and the navigated route in the vehicle. Dispatch can send customized routes directly to the driver running CoPilot Professional on the mobile device in the vehicle. In addition, dispatchers are provided with an automated alert if a driver goes off the planned route.
